### **AWI Brings Automated Weather Reporting to Venezuela Airfields**

Sacramento, CA (May 29, 2008)—All Weather, Inc. (AWI), a leading manufacturer of weather information systems and meteorological sensors, is working with GECEI Española SA to outfit 25 airfields across Venezuela with state-of-the-art Automated Weather Observing Systems (AWOS). The AWOS, developed by AWI, is an unmanned system that provides up-to-the-minute weather data to airport personnel, pilots, and meteorological offices.

“These systems will provide around-the-clock weather data to locations that, until now, have had limited access to weather information,” said Jason Hall, President of All Weather, Inc. “The airfields are often isolated and minimally staffed, so having a dedicated weather observer is impractical. The AWI AWOS will fill a crucial gap by providing continuous weather data. Knowing the conditions at an airfield ahead of time will undoubtedly make access to these locations easier and safer.”

Included in AWI’s AWOS are sensors for measuring wind speed and direction, temperature, humidity, rainfall, and barometric pressure. The AWOS makes the data collected by these sensors immediately available to pilots in flight via ground-to-air radio, and over dial-up connections for meteorological personnel and flight planners.

**About All Weather, Inc.**

All Weather, Inc. (AWI) is a leading developer of high-accuracy, high-dependability weather information systems that help users minimize risks in an unpredictable world. The company provides AWOS aviation weather systems and air traffic control display systems, as well as a wide range of high-accuracy meteorological sensors and systems, including laser ceilometers, runway visual range systems, lightning detection sensors, and a variety of other meteorological sensors. AWI's ASOS, AWOS, and AWSS systems meet the stringent standards of the International Civil Aviation Organization (ICAO), the World Meteorological Organization (WMO), and FAA. AWI has installed more than 2000 high-end automated weather systems around the globe, working with such leading authorities as the U.S. National Weather Service, FAA, ICAO, WMO and commercial users around the world.
