AWI Brings Automated Weather System to
Kirkuk Iraq

Sacramento, CA (October 21, 2009) - All Weather, Inc. (AWI), a leading manufacturer of weather information systems and meteorological sensors, is working with KUANTA to increase the safety for United States Military personnel who operate near the Kirkuk, Iraq airport. Safety is being enhanced by providing a state-of-the-art Automated Weather Observing System (AWOS). The AWOS III, developed by AWI, is an unmanned system that provides up-to-the-minute weather data to airport personnel, pilots, and meteorological offices in the Kirkuk region.

"These systems will provide around-the-clock weather data to the Kirkuk airport that, until now, have had limited access to weather information," said Jason Hall, President of All Weather, Inc. "The AWOS will increase safety and situational awareness for all users of the Kirkuk airport especially the United States Military. The AWI AWOS will fill a crucial gap by providing continuous weather data".

Included in AWI's AWOS are sensors for measuring wind speed and direction, temperature, humidity, rainfall, barometric pressure, visibility, cloud height, present weather, and runway visual range. The design of the Kirkuk AWOS is consistent with the requirements of CAT II type approaches.

About All Weather, Inc.

All Weather, Inc. (AWI) is a leading developer of high-accuracy; high-dependability weather information systems that help users minimize risks in an unpredictable world. The company provides AWOS aviation weather systems and air traffic control display systems, as well as a wide range of high-accuracy meteorological sensors and systems, including laser ceilometers, runway visual range systems, lightning detection sensors, and a variety of other meteorological sensors. AWI's ASOS, AWOS, and AWSS systems meet the stringent standards of the International Civil Aviation Organization (ICAO), the World Meteorological Organization (WMO), and FAA. AWI has installed more than 2,800 high-end automated weather systems around the globe, working with such leading authorities as the U.S. National Weather Service, FAA, ICAO, WMO and commercial users around the world.
