

CAMPBELL SCIENTIFIC - NEW PRODUCT ANNOUNCEMENT – March 2010

Campbell Scientific introduces the LR4 - Four Channel Latching Relay Module, featuring low power consumption and a non-volatile relay state. While conventional relays require power to hold a relay in one of its states, the LR4 allows power to be removed as the relay mechanically latches its state. Additionally, once a relay is set to a desired state the relay will remain in that state even if power is lost to the control module. Unique characteristics that will serve your data collection well!
